Software Engineering Leader with 15 years of experience spanning IC and management roles at Google, Booking.com, and startups. Proven track record of scaling high-throughput backend systems (1M+ QPS), leading reliability projects for global cloud infrastructure (GCE), and building high-performing engineering teams. Deep expertise in Golang, Java, Kubernetes, and distributed systems.

- Since April 2025** Google, Software Engineering Manager, Google Compute Engine.
- Defined and executed a multi-year engineering roadmap for GCE Control Plane Reliability to uphold the 99.95% availability target.
 - Built a high-performing team of 7 Software Engineers: hired talent and supported career development, resulting in 2 successful promotions.
 - Led a cross-organizational infrastructure initiative, unlocking deployments for 20+ engineering teams and enabling the organic growth of 50+ services.
 - Built infrastructure to enforce best reliability practices across 50+ services, enabling the services to handle 1M+ QPS.
 - Maintained hands-on IC contributions, adopting new tools and staying in touch with what team members are experiencing.
 - Served as a member of the on-call rotation responsible for the reliability of the GCE API, defending 99.95% availability globally.
- October 2020 to April 2025** Google, Senior Software Engineer in Site Reliability, Google Compute Engine.
- Served as Tech Lead of an SRE team; owned the team roadmap and execution in partnership with the manager.
 - Delivered multi-year project involving 4 separate developer organisations. Designed and developed new services in the GCE Control Plane and worked across the organisation to unblock the GCE API traffic migration.
 - Developed a capacity management tool utilised across Google, preventing at least 3 major outages by surfacing relevant capacity changes to service owners.
 - Served as Incident Commander for 2 major outages: mitigated impact, coordinated with Google infrastructure teams during incidents, wrote postmortems, and ensured follow-ups were addressed.
 - Coached and mentored other Software Engineers.
- April 2018 to July 2020** Booking.com, Software Engineering Manager.
- Held a combined role of Software Engineering Manager and Senior Software Developer: directly managed a team of Software Engineers alongside delivering hands-on work.
- Managed a team of software engineers. Provided mentoring and coaching for team members, owned multiple successful promotions, and hired talent.
 - Designed and executed a multi-quarter team roadmap. Partnered with stakeholders and platform customers.
 - Scaled the experimentation platform to microservices. Launched the first A/B tests in Java and JavaScript. Onboarded the largest Java service onto the A/B testing platform.
 - Integrated the A/B testing platform into Booking.com's Kubernetes infrastructure. Built and owned a sidecar running alongside every service in the company.
 - Built a highly scalable system that handled 400k+ requests per second.
 - Designed, wrote, and maintained client libraries for Java, JavaScript, and Perl.

March 2017 to April 2018	Booking.com, Full Stack Software Developer. Full Stack Software Developer on the Partner Experiments Team, responsible for the A/B testing platform for Booking.com partners: • Extended the existing A/B testing platform to Booking.com partners. • Collaborated with data scientists on building trustworthy metrics for analysing changes in partner behaviour. • Enabled customer support metrics for A/B tests across all product teams. • Maintained data pipelines generating metrics and minimising data loss. • Partnered with product management and data science teams to develop the A/B testing platform.
July 2015 to March 2017	Lazada, Senior Software Developer. Senior Golang Software Developer. • Developed a highly performant frontend Golang server, reducing page latency to sub-50ms. • Profiled and debugged performance bottlenecks in Golang applications. • Designed and implemented a config distribution library.
November 2012 to July 2015	Papeeria.com, Full Stack Developer. Full Stack Developer in a 3-person startup changing the way people write scientific papers.
June 2011 to November 2012	Lanit-Tercom, Junior Software Engineer. Android developer and contributor to two major Android apps the company was developing for external clients.

Technologies

Skills	Technical Leadership, Distributed Systems, Kubernetes
Languages	Java, Go, Python, TypeScript/JavaScript

Education

2008 – 2013	Specialist (Master's equivalent) Saint-Petersburg State University, Applied Mathematics
--------------------	---
