- March 2017 to present** Amsterdam, Booking.com, Senior Fullstack Software Developer and Team Lead.
Booking.com is one of the world's leading digital travel companies. I was leading a team of developers working on online experiments infrastructure and scaling it to support the company move to SOA. The A/B testing is used by most of the product teams in the company and we had to build a scalable and reliable system which was easy to use.
- Jul 2015 to Feb 2017** Moscow, Lazada, Senior GO Developer.
Lazada is one of the biggest web shops in Southeast Asia and the market leader in the countries it operates. Due to the local market nature we had to make an extremely scalable system being able to handle spikes of 10-20 times usual traffic. I was not only just a developer, but I partnered with teams in other countries, so we can collaborate efficiently. As a developer I worked on providing core libraries for the whole company (for example, configuration library) and building a frontend application server.
- Nov 2012–Jul 2015** Saint-Petersburg, Papeeria.com, Developer.
Together with 2 other developers I was working on building a real IDE (Integrated Development Environment) for scientists. Being a very small team we worked on everything ranging from devops and deployment to UX and client side development. Among the things I personally worked on there are collaborative text editing, sandboxing of LaTeX compilation and git integration
- Sep 2013–Jun 2014** St. Petersburg National Research University of Information Technology, Mechanics & Optics, Lab class instructor.
I was a lab class instructor for course "Algorithms and data structures". During my time in the role, I spent a lot of time with students doing hands on programming and I tried my best to show them what's real world programming is like.
- Jun 2011–Nov 2012** Saint-Petersburg, Lanit-Tercom, Junior java developer.
I was a part-time developer working for various company clients. During my time in the company I worked on two android applications: a social network and interactive map for a big conference. Also I was researching various new technologies to be adopted by the company, for example java application servers and benchmarking them.
- Oct 2010–May 2011** Saint-Petersburg, Lanit-Tercom, Student project member.
I was on the team of eight students who wrote an android application for geocaching.su from ground-up. We were supervised by two experienced developers who helped us with system design and code review. We did everything: from talking to the API provider and writing the app de to working on UX. The app has more than 50000 downloads and 4.5 average rating. You can find the app at <https://play.google.com/store/apps/details?id=su.geocaching.android.ui>
